### Special Experiences – Example: Interaction between PDM / PLM and ERP (1/2)

#### PDM / PLM product structure and ERP article structure are not identical!

#### Variances in the Product / Article Structures

 Variants used in ERP (e.g. single article, generic article, display, set) do not exist in PDM / PLM

#### Changes to objects lead to changes in PDM / PLM

- Changes between referenced objects (such as product, article, RFQ, purchasing order) and indirect referenced objects (such as allocation tables) need be considered.
- Comprehensive End-to-End tests are necessary

Overall business object model required along the whole supply chain

#### Fashion Forum, 03.-04.07.2018

- A tailor-made Suit for Product Development and Lifecycle Management –
   Goals and Requirements of the PDM / PLM Solution
- Designing the tailor-made Suit –

Guideline to tailor the Implementation Methodology

• Fitting the tailor-made Suit –

Hands-on Experience and PDM / PLM Lessons Learned and Peculiarities

## **Summary and Outlook**

### • Perfect fit?

- Clear goals and requirements prevent moving targets
- Detailed tailoring of methods and approaches required
- Overall process and business object model required along the whole supply chain
- Implementation project incl. ERP integration: approx. 1.5 2 years
- Overall release and test management remain a challenge
- Future Prospects (Extract)
  - Integration of Product Information Management (PIM)
  - Further optimization of the processes e.g. reduce sample process costs with integration of 3D-Virtuality
